

POLE STAR DEFENSE

Capabilities Statement: Pole Star Defense

Corporate Overview:

Pole Star Defense is a leading provider of maritime domain awareness, maritime security, and fisheries monitoring systems to the government sector. Since 1998, we have pushed the limits of innovation, mitigating growing threats to ships, supply chains, cargo, territorial waters and, most importantly, safety of lives at sea and beyond. Today, we continue to develop and implement pioneering intelligence technologies to protect customer vessels, people, maritime domain, and reputation.

Pole Star Defense designs, builds and supports National Data Centers on behalf of over 60 governments and flag administrations; monitoring more than 40,000 ships, for over 1,000 clients, including the governments of the USA, UK, Canada, Panama, Liberia, and the Marshall Islands - the largest fleets of the United Nations – and the International Maritime Organization’s network. We continue to develop new ways of turning complex geospatial data into accessible insight across critical government maritime safety, surveillance, regulatory conformance, sanctions screening, trade compliance, tracking, and security.

CORE SERVICES

Shipping & Offshore: We provide cutting edge vessel tracking solutions as well as SSAS management, LRIT conformance testing, risk insight, counter piracy, and (EVE) Environmental Vessel Efficiency monitoring.

Financial Markets & Compliance: Through the use of our award-winning PurpleTRAC regulatory technologies, we enable institutions with sanctions and risk management exposures in maritime trade to screen and track vessels and their associated ownership and management’s regulatory status in seconds.

Government: Our 60+ government clients benefit from comprehensive end-to-end service and the highest levels of IT security, reliability, redundancy and scalability. Our flagship platform Maritime Domain Awareness (MDA) National Data Center provides a single window UI for Maritime Surveillance international compliance, national security, and safety of life.

DIFFERENTIATORS

The Pole Star Defense Management Team and its skilled personnel have resources with a broad spectrum of knowledge in technical and managerial experience with governments around the world. Pole Star Defense's core capabilities are:

- Maritime Domain Awareness
- Risk Intelligence
- National Data Centers
- US DOS Sanction Screening and Compliance
- Satellite Tracking
- Geospatial Data Services

PAST PERFORMANCE

Pole Star Defense is the operator of the United States Coast Guard/DHS - National Data Center (NDC) and Application Service Provider (ASP) under IDIQ contract No. # **70Z02320DPR600200**. We serve as the developer and operator of the DHS/USCG National Data Center. Designated as National Security Critical by DHS, our mission is to support domestic and international search and rescue operations, maritime surveillance, incident management, and enhanced geospatial data services for the USCG.

Pole Star Defense has consistently received superior ratings in CPARS
